

WSUD Clauses

Councils may like to incorporate one or more of these Water Sensitive Urban Design (WSUD) clauses into council reports, tenders, expressions of interest, briefs etcetera and to facilitate the embedding of WSUD elements into projects.

Water Sensitive Urban Design (WSUD) aims to manage the effects of urban development on the urban water cycle by considering the management of potable water, wastewater and stormwater elements in an integrated manner.

Water Sensitive Urban Design (WSUD) elements are to be integrated into the redevelopment of the ***** so as to meet the targets established in the Council's WSUD Development Control Plan.

A Water Sensitive Urban Design (WSUD) specialist is to be engaged by the developer to integrate and configure WSUD elements into the masterplan.

Water Sensitive Urban Design (WSUD) can be integrated into the development footprint as landscaped vegetated areas, which double as treatment elements. For more information on WSUD elements please refer to Councils' WSUD Policy.
